

Why Is Recycling Different At Home Compared To Being In The Office?

Since the pandemic broke out, this question has been asked by a huge number of people from all different business sectors and walks of life... The main reason for the difference in home and office recycling is that different councils have different rules...

For Example Each council collects its plastic differently.

- Most collect bottles
- Others collect pots, tubs and trays
- Some collect a much wider range

Some authorities collect all their recycling in one bin

Others ask households to separate their plastics from the rest of their recycling...

**People argue over what plastic
they can recycle**

47%

of people say they disagree at home
about what should and shouldn't go
in the plastic recycling

26% say they disagree more than
once a month

sustainable

Making A Decision...

Ensure there are waste areas for groups of containers to go into e.g. a general waste container next to a dry mixed recycling container. It's about making conscious decisions but we have to try and make it as easy as possible for people to follow and understand.

We can help you do this, by providing colour coded containers / appropriate signage to encourage staff / members of the public to make that right decision and know exactly whether their item is going into the correct bin.
